PROFESSIONAL SUMMARY

Entry-level SOC Analyst (L1) and IT Support Specialist with 420+ hours of hands-on training in security monitoring, log analysis, alert triage, and incident response across 15+ practical labs, alongside a solid foundation in network administration and enterprise infrastructure. Trained on SIEM platforms (Splunk, IBM QRadar, FortiSIEM, Security Onion) and SOAR playbooks (FortiSOAR) to detect, investigate, and escalate security events, and skilled in threat and vulnerability assessment, network traffic analysis (Wireshark), and firewall/IDS-IPS monitoring (FortiGate). Combines this security foundation with practical experience supporting Windows, Active Directory, and Cisco network environments to deliver reliable first-line detection, troubleshooting, and support.

EDUCATION

Bachelor of Technology in Information Technology | Network Specialization | Fayoum International Technology University (FITU) | 2022 - 2026

GPA: 3.8 out of 4.0

PROFESSIONAL TRAINING

Cybersecurity & SOC Analyst (L1) Trainee | *National Telecommunication Institute (NTI) | Cairo | July 2026 – December 2026*

- Completed 420+ hours of hands-on cybersecurity and SOC training across 15+ practical labs, covering SIEM monitoring, incident response, and penetration testing.
- Monitored security alerts and analyzed logs across SIEM platforms — Splunk, IBM QRadar, FortiSIEM, and Security Onion — to detect anomalies, triage events, and identify indicators of compromise (IOCs).
- Investigated and escalated security incidents using FortiSOAR playbooks and Forti-Analyzer, applying structured incident response and reporting procedures aligned with SOC workflows.
- Performed vulnerability scanning, network/port scanning, and penetration testing (reconnaissance, web application, and wireless security testing) to identify exploitable weaknesses.
- Analyzed network traffic with Wireshark and monitored FortiGate firewalls, IDS/IPS, IPsec/SSL VPNs, and web filtering rules to detect and contain malicious activity.
- Applied Cisco CyberOps and Red Hat Linux administration to secure endpoints, and completed a career-development track in business English, leadership, and project management, culminating in a capstone project.

IT Technical Support Trainee | *DEY (Creativa Innovation Hubs) | Minya | December 2025 – February 2026*

- Provided first-line (Tier 1) technical support, triaging and resolving hardware, software, and network tickets to maintain consistent system uptime.
- Administered Windows and Active Directory environments, managing user accounts, permissions, and access controls to reduce unauthorized-access risk.
- Logged, tracked, and escalated incidents through a structured troubleshooting and documentation process, meeting service-quality standards.
- Monitored endpoint and network health to proactively flag issues before impacting end-users.

CCNA Trainee | *CAPMAS HRDC | Cairo | October 2025 – November 2025*

- Completed enterprise network infrastructure training focused on advanced routing and network security fundamentals.
- Configured VLANs, NAT, and ACLs to segment traffic, enforce access control, and strengthen network security posture.
- Deployed OSPF and EIGRP routing to ensure scalable, resilient multi-branch connectivity — the network layer SOC monitoring relies on.
- Simulated and stress-tested enterprise network architectures via Cisco Packet Tracer to validate stability and identify misconfigurations.

Network Infrastructure Trainee | *National Telecommunication Institute (NTI) | Cairo | July 2025 – August 2025*

- Studied core enterprise routing, switching, and IP subnetting design — foundational knowledge for reading network traffic and log data in a SOC context.
- Configured Cisco routers and switches to establish secure, reliable, and monitorable network connectivity.
- Diagnosed and resolved connectivity issues using structured CCNA testing strategies to minimize data transmission errors.
- Evaluated LAN and WAN infrastructure frameworks to optimize security and operational performance.

PROFESSIONAL LICENSE

- Cisco Certified Support Technician Networking | Cisco Certified Networking | May 2026 | Valid Until May 2031

TRAINING COURSES

- CCNA: Switching, Routing, and Wireless Essentials | Cisco Networking Academy program | October 2025
- CCNA: Introduction to Networks | Cisco Networking Academy program | August 2025
- CCNA: Enterprise Networking, Security, and Automation | Cisco Networking Academy program | October 2025
- AI-Driven Security (Sentinel Agent) | Google Developer Groups on Campus Future Academy | May 2026
- Cybersecurity Foundation | Palo Alto Networks Cybersecurity Academy | May 2026

- Cloud Infrastructure (CloudPilot) | Google Developer Groups on Campus Future Academy | May 2026
- Web Intelligence (VisionVibe) | Google Developer Groups on Campus Future Academy | May 2026
- AI Mobile Development (Hakim Al-Zaman) | Google Developer Groups on Campus Future Academy | May 2026
- Introduction to Artificial Intelligence | Information Technology Institute (ITI) | August 2025 | 90 hours
- ASP.NET | Information Technology Institute (ITI) | February 2025 | 60 hours
- Internet of Things (IoT) | Information Technology Institute (ITI) | July 2024 | 30 hours
- AI Augmented Professional Development Skills | Alx – AI Career Essentials | July 2024 | 8 weeks
- Windows – MS Office Package – Internet – IT | Egyptian Center for Computer Science and Languages in Cairo | June 2024 | 20 hours
- ICDL / General English Level B2 / Conversation English | MSM for Vocational Training | 2024

PROJECTS

Graduation Project — Network Automation and Secure Program with Python | Fayoum International Technology University (FITU) | 2026

- Developed a Python-based automation solution exceeding 2,000 lines of code to automate Cisco network deployment and configuration.
- Automated Layer 2 and Layer 3 topologies using Netmiko across multi-branch EVE-NG environments.
- Engineered network defenses by automating branch firewalls and access control lists for filtering.
- Implemented a Splunk-based SIEM solution to facilitate continuous monitoring and threat detection.

Electronic Calculator | PIC16F877A | Embedded C

- Designed a digital calculator architecture utilizing PIC16F877A hardware to process operations.
- Integrated matrix keypad and LCD modules to establish an interactive and responsive peripheral.
- Programmed arithmetic core algorithms using Embedded C to secure reliable execution stability.

SKILLS

Personal Skills: Technical Communication • Analytical & Critical Problem Solving • Team Collaboration • Adaptability & Continuous Learning • Time Management • Attention to Detail

SOC / Security Operations: SIEM Monitoring & Log Analysis (Splunk, QRadar, FortiSIEM, Security Onion) • Alert Triage & Escalation • Incident Response (IR) & Reporting • Indicators of Compromise (IOC) Identification • SOAR Playbooks (FortiSOAR) • Vulnerability Assessment & Scanning • Network Traffic Analysis (Wireshark) • Firewall / IDS-IPS Monitoring (FortiGate) • Penetration Testing Fundamentals • Threat & Risk Assessment

Technical Skills: LAN/WAN Infrastructure Design • Cisco Routers and Switches Configuration • Linux & Windows Server Systems • Active Directory & User Management • Advanced Network Troubleshooting & TCP/IP • Programming with Python, C, C++, Java, Dart, Flutter

LANGUAGES
